

**Customized Drives And System Solutions: Specialists For Your Speed**

Outside of our range of motor elements (built-in motors) SycoTec is developing and manufacturing customized drive systems specific to your requirements. The choice of motor technology as well as the design of the system is always a very tight, hand-in-hand effort with our customers. As a system supplier, we certainly support and research with you the right drive (inverter), if it is not presently available. The SycoTec product range of e@syDrive inverters, can offer you a quite good range and suitable units (with ASM or BLDC/PMSM technology).

Our challenge is, to offer you the highest quality system as the single source provider, which means for you "one point of contact".
